## **SELECT-SAI OPENS TROY FACILITY**

Select-SAI, Inc., a manufacturer of welding electrode products, has purchased the former RevWires building and is establishing its Troy, Ohio operations there. The facility, located at 2015 West Stanfield Road, encompasses 79,400 square feet and will be utilized for manufacturing and support functions in conjunction with Select-SAI headquarters in Fort Loramie, OH. The plant commenced operations in October and the company has indicated that it will require an additional 15-20 new employees.

Since its inception in 1996, Select-SAI has been dedicated to setting “The Standard of Excellence in Tubular Welding Electrodes”. With the commitment to providing the highest quality products, the best service and the most value-added to its customers, Select-SAI has experienced exceptional growth – a growth that continues during the company’s eighteenth year.

An important reason for the necessity to enlarge Select-SAI’s plant operations was the rapid advancement in the number of premium, high quality welding electrode products offered to its extended user base. The company produces a complete line of flux cored and metal cored welding electrode products including carbon steel, low alloy, stainless steel, nickel alloy and hardsurfacing electrodes.

Select-SAI President Dale Stager emphasized that the determining factor in purchasing the Troy Operations was the need “to better serve our customers to meet their growing electrode product and service requirements”.
